

For decades, Pella has met the diverse window and door design challenges faced by the architect with innovative solutions for a wide variety of commercial, institutional and multi-unit residential projects, from ground breaking new construction to careful restoration of historic buildings.

Our responsiveness to your design and performance requirements, commitment to innovation and unsurpassed experience and expertise enable us to create unique solutions, fulfilling your vision with durable, high-quality, high-performance products perfectly matched to your needs.

Pella is dedicated to helping you surpass not only your clients' expectations but your own. And we make it easy, with an unmatched level of service and support. In fact, Pella Corporation was cited in Architectural Record's Readers' Choice Awards as "the manufacturer most helpful in solving site-specific, design or technical problems".

Our highly qualified architectural consultants are on call and ready to provide full technical service and project support to make your job easier. An architectural consultant can assist you at every stage of your project, from schematic design to construction documents.

Your Pella architectural consultant will also provide replacement or renovation assessments, and visit the project site to determine time- and cost-efficient installation methods, and measure openings.

In short, we offer an array of valuable resources to help you execute your project efficiently, on time, and within budget requirements.

- Initial consultation
- Performance analysis
- Code compliance
- Site survey
- On-site installation guidance
- CAD details and shop drawings
- Design assistance and implementation
- Field testing
- Custom product design
- Specifications, product mock-ups and samples
- Budgets

### BUDGETS

We can help you keep project costs on track and within budget. Just ask, and our Pella architectural consultants will provide you with detailed window budgets during the design development and working drawing phases so you can plan efficiently.

### DRAWINGS

Pella offers design and specifying professionals a window and door design drawing program and an installation shop drawing program that specifically addresses each project's level of complexity.

Our preliminary design drawings are available to you during the design development and working drawing phases of the project—complete with recommended installation details—to help you reduce your research time. These drawings can be sent to you in an electronic format that can easily be plugged into your working drawings.

Our shop drawings are available in various levels of complexity. Pella matches the appropriate level to your project, so you receive the information that best serves your needs.

Shop drawings may be sent, reviewed and "red-lined", and returned electronically, allowing faster drawing and order delivery.

### SPECIFICATIONS

Our Pella architectural consultants will provide you the information you need to write your window and door specifications. We can help you make them as competitive or proprietary as you wish. We invite you to sit down with us during the working drawings phase and let a Pella representative help you eliminate the kinds of additional costs that result from redundancies and contradictions (which often require addenda or change orders).
